Kitchen & Bath Masters Maps Out the Bathroom Remodel Timeline

Kitchen and Bath Masters Design & Remodeling

October 30, 2026

ARLINGTON, VA - Kitchen & Bath Masters has published a guide that explains how long a bathroom remodel takes and what happens at each stage. The design and remodeling company wrote the guide for homeowners who want a clear schedule before demolition begins.

“For many households the hardest part of a bathroom remodel is not knowing what happens next, so the guide lays out each stage and what can change its length,” said Isa Pehlivan, principal designer at Kitchen & Bath Masters. The guide is written for homeowners planning a single bathroom or a full primary suite.

Homeowners can read the complete timeline guide on the company website. It links to related planning resources on budget, countertops and layout.

According to the guide, a standard bathroom remodel often takes three to six weeks of active construction once design decisions, material selections and scheduling are complete. The full window from first consultation to completion is usually wider, at six to twelve weeks, because it includes design, ordering, permits where required and contractor scheduling.

The guide breaks the work into six steps. It starts with a consultation covering goals, measurements and budget range, then moves to design and selections, permits and ordering, demolition and rough-in, tile and installation, and a final walkthrough with a punch list and care notes.

Each phase is paired with the factors that can add time. Custom orders and changing selections slow the design stage, while layout changes involving plumbing, electrical or ventilation can extend permitting. Demolition can reveal water damage, older pipes or uneven framing that must be corrected before new finishes go in.

Tile is described as one of the most schedule-sensitive parts of the project. Shower waterproofing, slope, layout, niches, curbs and curing time all matter, and a simple subway pattern usually moves faster than large-format porcelain, mosaics or herringbone.

To keep a project on track, the guide recommends confirming the layout, fixtures, tile pattern, grout color, vanity size, countertop material and lighting before demolition. It also suggests keeping a written list of approved selections and avoiding product swaps once ordering begins.

The final walkthrough is treated as more than a punch list. The guide explains that it should also cover maintenance, including how to clean new surfaces, when natural stone may need resealing, how to protect grout and what to watch for during the first few weeks of use.

The guide also lists common delays. These include late product selections, backordered tile or fixtures, custom shower glass lead times, inspection availability and design changes made after demolition.

For homes with only one full bathroom, the guide recommends planning an alternate arrangement or a phased approach. Homeowners with a fixed deadline are encouraged to start planning two to three months ahead.

Kitchen & Bath Masters handles design, selections and construction for its bathroom remodeling clients from its Langston Boulevard location in Arlington. Homeowners who want to see completed bathrooms and kitchens before starting can browse the company's projects gallery .
